Good day Trevor.

I would just like to give you some feedback on the VPS product that you supplied us to protect our rally cars against stone chip.

As I told you on your visit, these cars are driven in the most extreme and harsh conditions imaginable. They get driven on gravel roads with speeds exceeding 170km/h and over rocky sections with rocks the size of golf balls. We have definitely saved a huge amount, as our doors and rear wheel arches had to be patched up and re-sprayed after each event. With your product the need to do this has been dramatically reduced. The adhesive really bonds well, and there hasn't even been a real need to replace any of the tape after especially rocky and tough events. This product has really helped with keeping our cars in good cosmetic conditions on even the toughest events and saved us a lot of time and money on maintaining it.

Thanks a lot for your support Trevor.

Kind regards.
